

WORKSHEET 3

Task 3: Write the correct component according to the given function. One component is described twice. Which one?

When you try to do this exercise individually, you will remember the words better and more easily.

Component	Function
	A gas tight seal is formed between it and the cylinder bore.
	It opens at the correct time to allow the burnt exhaust gasses out of the cylinder.
	The pressure on the piston is transferred to it.
	It opens at the correct time to allow the air/fuel mixture into the cylinder.
	It moves up and down the cylinder and forms one portion of the combustion chamber.
	It stores energy to keep the engine running during non-power strokes.
